PROFESSIONAL SUMMARY

Data Analyst with 3+ years of experience turning operational and customer data into stakeholder-ready insights across logistics, mobility, and tech. Hands-on with Python, SQL, BigQuery, BI dashboards (Power BI, Tableau, Looker), and applied optimization (Gurobi/MIP). Strong fit for analytics roles spanning operational reporting, performance dashboards, KPI tracking, and data-driven decision support.

EDUCATION

Otto-von-Guericke-Universität (OVGU), Germany

Mar 2024 – Aug 2026

M.Sc. Operations Research & Business Analytics | Grade: 1.9

Relevant Coursework: Computational Transportation, Financial Engineering, Econometrics, Business Decision Making, Sustainability and Quality in Supply Chains, Databases,

University of Ljubljana, School of Economics & Business, Slovenia

Feb 2025 – June 2025

Erasmus+ Exchange Program | *Coursework:* Business Intelligence & Analytics, Sustainability and Quality in Supply Chains

Institute of Business Administration (IBA), Pakistan

Aug 2016 – May 2020

B.Sc. Accounting & Finance | Grade: 3.42 / 4.00 (German equivalent: 1.9)

EXPERIENCE

Bettermile (GLS eCom Lab) — User Insights & Analytics

Dec 2024 – Present

- Designed a multilingual survey analytics framework spanning 4 product surveys across 5 countries; surfaced findings that drove product decisions, 92.7% route editing demand, 87.4% live-monitoring adoption, and 4.12/5 landing page satisfaction with country-level gaps identified.
- Built Intercom and Instabug CSV analyzers replacing manual ticket-by-ticket review, saving an estimated 10+ hours weekly across the team via on-demand dashboard generation from raw exports.
- Developed a depot performance benchmarking tool covering Germany's 6 regional zones (Nord, Süd, West, Ost, Center, Süd-West), enabling regional managers to identify underperforming depots through dynamic KPI filtering and correlation analysis.
- Engineered Python automation pipelines processing raw CSV exports from Intercom, Instabug, and YouTube, eliminating manual data preparation and enabling repeatable analysis workflows.

US Mobile — Product Experience Analyst

July 2023 – Feb 2024

- Analyzed customer interaction patterns across 40-45 daily network issues, identifying recurring failure modes and providing data-driven insights that informed engineering prioritization.
- Designed and executed 4 customer re-engagement campaigns targeting churned segments, applying customer lifecycle analysis to optimize return experience and minimize re-activation friction.
- Built monthly performance scorecards for 15 junior analysts using Klaus, surfacing coaching opportunities via quality-control metrics and improving consistency of agent-customer interactions.
- Triaged 8-10 daily fraud cases flagged by Stripe Radar through pattern analysis, ensuring FCC regulatory compliance during credit-card verification workflows.

SWVL Pakistan PVT Limited

Business Intelligence Specialist

Feb 2021 – Aug 2021

- Engineered real-time operational dashboards integrating Google BigQuery and Sheets, giving the operations team self-serve analytics for daily revenue and cost decisions.
- Reduced vendor complaint volume by 4% week-over-week through Zendesk-based resolution workflow redesign and root-cause analysis.
- Implemented controls stabilizing GMV fluctuations to 5-7% week-over-week, supporting financial predictability across the B2B and TaaS verticals.

Treasury & Taxation Specialist

Sept 2020 – Feb 2021

- Tightened cash flow forecasting horizon from 4 weeks to 1 week through redesigned planning and monitoring processes, enabling tighter liquidity management for a rapidly scaling startup with ~USD 250K/week remittance flow.
- Spearheaded SWVL's first external audit, structuring the financial books that laid groundwork for the company's eventual NASDAQ listing.

KEY PROJECTS

Supply Chain Network Optimization — Scientific Project, OVGU

Oct 2025 – Jan 2026

- Built a Mixed-Integer Programming model in Python (Gurobi) to optimize facility, carrier, and port assignments for 9,200+ orders in a microchip manufacturer's outbound network under capacity and service-level constraints.
- Designed a 3-tier soft capacity penalty framework to resolve infeasibility, achieving optimality in 0.33 seconds and identifying \$171K in cost savings versus baseline.

Last-Mile Delivery with Autonomous Robots — OVGU

Oct 2024 – Jan 2025

- Developed an exact MIP model and a custom nearest-neighbor heuristic in Python (Gurobi) to schedule last-mile deliveries combining trucks and autonomous robots under capacity, battery, and time-window constraints.
- Benchmarked the heuristic against the exact model, demonstrating 85-95% solution quality at 99.8% reduced computation time, enabling scalability to large urban delivery scenarios.

SKILLS

Programming: Python, SQL, R, MATLAB, STATA

Optimization & Modeling: Mixed Integer (& Linear) Programming, A/B Testing, Gurobi, Statistical Analysis, Forecasting, Network Design

BI, Analytics & AI: Power BI, Tableau, Looker Studio, AWS QuickSight, MS Excel (advanced), Claude, Github Copilot, NotebookLM

Data Platforms & Workflow Tools: Google BigQuery, Snowflake (Basic), Mixpanel, Jira, Confluence, Notion, SharePoint, Zendesk, Pipefy

Languages: English (C1), German (A1), Urdu (Native)
